--7. (New) An image file apparatus for reading out an image file that has been recorded on a first loadable and removable recording medium and recording said image file on a second loadable and removable recording medium, comprising:

a file-number readout device for reading out a last file-number of file-numbers for image files that have been recorded on the second loadable and removable recording medium;

an incrementing device for incrementing the last file-number read out by said file-number readout device; and

an image-file recording controller for changing a file name of the image file that has been read out of the first loadable and removable recording medium to the incremented file-number generated by said incrementing device and recording the read image file on the second loadable and removable recording medium.

8. (New) The apparatus according to claim 7, further comprising a grouping device for grouping image files, which have been recorded on the second loadable and removable recording medium by said image-file recording controller, according to the types of images represented by the image files.

9. (New) The apparatus according to claim 1, wherein said grouping device causes a file name corresponding to each group to be recorded on the second loadable and removable recording medium.

10. (New) An image file method in an image file apparatus for reading out an image file that has been recorded on a first loadable and removable recording medium and recording said image file on a second loadable and removable recording medium, comprising the steps of:

reading out a last file-number of file-numbers for image files that have been recorded on the second loadable and removable recording medium;

incrementing the read out last file-number, and

changing a file name of the image file that has been read out of the first loadable and removable recording medium to the incremented file-number and recording the read image file on the second loadable and removable recording medium.--
